

Configuration Management

- Slack – Communication for when we are unable to meet and work together.
 - Used to share any updates made on our documentations.
 - Kept us on track with getting our views done in time.
- Git & GitHub – Used to control documentation source and source code
 - Used to update, push, and pull any changes made to our source code.
 - Used to push and pull documentation as well.
 - Saved time from re-downloading all updated documentation from other teammates.
- Lucid Chart – Used for creating views
 - Easy editor to create and update our views.
 - Saved time on creating our tables and having to updated our tables.
- Atom – Text Editor used for writing code (Integrates with GitHub)
 - Provided hints & feedback on source code in case any syntax errors occurred.
- Apache – Web Server
- MySQL – Relation Database Server
- Linux(Ubuntu 16.04) – OS for running servers
 - Used to run our servers
 - Convenient for all classmates to use the same server.
